

# APPENDIX N

## Links to Natural Capital and Biodiversity Net Gain assessments

This appendix provides the links to the Natural Capital and Biodiversity Net Gain assessments carried out by each company to inform decision making in the regional plan.

The Natural Capital and Biodiversity Net Gain assessments are two of the required environmental appraisals carried out on the component WRMPs. They were carried out in a consistent way across the Water Resources West companies to support our integrated approach to planning and regulatory expectations. The appraisal findings were used to support decision making on the selection of the best value combination of options, to minimise/mitigate any adverse effects and maximise any environmental benefits associated with any of the options. This approach ensures that the decision making process is evidence based, consistent and considers environmental impacts.

### Table of links

Table 1 below contains the links to the Natural Capital and Biodiversity Net Gain assessments carried out by each company within Water Resources West.
